STATINTL

Dear Ray:

Here is the information you'll need on Dick's gratings:

1. Glass Size: 11  $\pm \frac{1}{32}$  x 11  $\pm \frac{1}{32}$  x 1/4 (IN INCHES)

2. Grating Area: 10  $\frac{1}{2}$  ( $-\frac{1}{4}$ ) x 10  $\frac{1}{2}$  ( $-\frac{1}{4}$ ) (IN INCHES)

We will undoubtedly enclose the plate in a thin stainless steel channel (like glass in a storm window sash) extending 1/4" into the field of the plate. The clear portion is then reduced to 10 3/4" x 10 3/4", not counting tolerance. The channel is generally between 1/32" and 1/64" thick.

Robin
